## DESIGN

Figure 1. Design

Using the modular concept of the SRD998, the positioner can be optimally adapted to the application. In addition to connection manifolds with various threads, mounting kits for each drive and extensive accessories, these also include integrated pneumatic amplifiers in various performance classes.

### Pneumatic Amplifiers

Depending on the actuator, a single or double-acting pneumatic amplifier is used.

- ▶ Codes BxS - Single Acting
- ▶ Codes CxS - Double Acting

Single-acting pneumatics have versions B0S, B1S and B2S that differ in air flow. For the double-acting pneumatics, there are the versions C0S, C1S and C3S, which differ in the air performance.

For drives with increased air output, a correspondingly powerful supply air station is required.

## TECHNICAL DATA

**Supply**

Supply air pressure

- ▶ B0S, C0S - 1.4 to 6 bar (20 to 87 psig)
- ▶ B1S, B2S - 1.4 to 10 bar (20 to 145 psig)
- ▶ C1S, C3S - 1.4 to 10 bar (20 to 145 psig)

Output to actuator - 0 to ~100% of supply air pressure (up to 5.5 bar at 6 bar supply air pressure)

Air supply - according to ISO 8573-1

- ▶ Solid particle size and density class 2
- ▶ Oil rate - class 3
- ▶ Pressure dew point 10 K under ambient temperature

We recommend the use of a filter regulator for air supply of the positioner. It reduces the air pressure to the actuator's maximum pressure, keeps it constant, and filters the air. For the pneumatics with standard flow (B0S, B1S, C0S) we recommend the FRS02, FRS03, or FRS923 filter regulator. When using other brands, a filter grade of 30 µm or better is supported.

For the pneumatics with high flow (B2S, C1S, C3S) we recommend the High Flow Filter Regulator FRS04 or FRS05 with a filter grade of 5 µm. When using other brands, a filter grade of 5 µm is supported.

**Travel Range**

Stroke range	8 to 260 mm (0.3 to 10.2 in) with standard feedback levers; special levers on request
Rotation angle range	Without mechanical stop up to 95° angle (up to 120° on request)

**Response Characteristic<sup>(1)</sup> (2)**

Sensitivity	< 0.1% of travel span
Non-linearity (terminal based adjustment)	< 0.6% of travel span
Hysteresis	< 0.3% of travel span
Supply air dependence	< 0.1%/1 bar (15 psi)
Temperature effect	< 0.3%/10 K
Mechanical vibration effect according to IEC 60068-2-6 (2007) for 10 to 500Hz up to 2g	
For Pneumatics B0S	▶ < ±0.25% up to 80Hz and 1g ▶ < ±0.25% up to 70Hz and 2g
For Pneumatics B1S, B2S	▶ < ±0.25% up to 70Hz and 1g ▶ < ±0.25% up to 50Hz and 2g
For Pneumatics C0S	▶ < ±0.25% up to 400Hz and 1g ▶ < ±0.25% up to 70Hz and 2g
For Pneumatics C1S, C3S	▶ < ±0.25% up to 55Hz and 2g

In case of high vibrations, we recommend using remote mounting solution.

**Note for Single/Double Acting Operation**

For optimal control performance, the use of double acting positioners onto single acting actuators is not recommended.
