## Discover Modicon

Industrial Edge control for IIoT

Modicon IIoT-native edge controllers manage complex interfaces across assets and devices or directly into the cloud, with embedded safety and cybersecurity. Modicon provides performance and scalability for a wide range of industrial applications up to high-performance multi-axis machines and high-available redundant processes.

To be competitive in today's digital era, machine builders must be innovative. Smart machines, those that are better connected, more flexible, more efficient, and safe, are enabling machine builders to innovate in ways never before possible.

EcoStruxure, Schneider Electric's open, IoT-enabled architecture and platform, offers powerful solutions for the digital era. As part of this, EcoStruxure Machine brings powerful opportunities for machine builders and OEMs, empowering them to offer smart machines and compete in the new, digital era.

EcoStruxure Machine brings together key technologies for product connectivity and edge control on premises, and cloud technologies to provide analytics and digital services. EcoStruxure Machine helps you bring more innovation and added value to your customers throughout the entire machine life cycle.

**Innovation at Every Level for Machines is full systems across three layers:**

- Connected products  
Our connected products for measuring, actuating, device level monitoring, and control adhere to open standards to provide unmatched integration opportunities and flexibility
- Edge Control  
We are IIoT-ready with a proven set of tested and validated reference architectures that enable the design of end-to-end open, connected, and interoperable systems based on industry standards. Ethernet and OPC UA facilitates IT/OT convergence meaning machine builders reap benefits from web interfaces and cloud.

- Apps, Analytics & Services  
Seamless integration of machines to the IT layer allows the collection and aggregation of data ready for analysis – for machine builders and end users alike this means increased uptime and the ability to find information faster for more efficient operations and maintenance.

**These levels are completely integrated from shop floor to top floor. And we have cloud offers and end-to-end cybersecurity wrapped around.**

EcoStruxure Machine makes it easier for OEMs/ machine builders to offer their customers smarter machines. The advent of smart machines is driven by the changing needs of end users:

- Evolving workforce
- Reducing costs
- Dynamic markets
- Shorter life cycles
- Prioritizing safety and cybersecurity

EcoStruxure Machine provides one solution for the whole machine life cycle:

- With Smart Design & Engineering the time to market is reduced by up to 30% using our automated engineering and the simulation capabilities
- During Commissioning & Operation of the machine, resources such as energy, material and loss can be improved, and with seamless integration to the IT world efficiency can be improved by up to 40%
- Smart Maintenance & Services reduces the time for corrective actions up to 50%

(1) Formerly named SoMachine Basic.

(2) Formerly named SoMachine, EcoStruxure Machine Expert merges both former software ranges, SoMachine and SoMachine Motion.

### Machine Automation

### Machine control

The scalability and consistency of I/O ranges allow you to select the right offer depending on your needs

Embedded Safety provides holistic solutions to Modicon M262 and PacDrive LMC controllers, increasing overall safety demand in Machine Automation

All these devices are managed within a single software, EcoStruxure Machine Expert, a powerful and collaborative engineering environment

- > From basic to motion- and robot-centric machines with the PacDrive 3 offer, Modicon controllers and solutions bring a consistent and scalable response to achieving flexibility, performance, productivity, and digitization.
- > Modicon TM3 Optimized I/O system for more compact and modular machines
- > Modicon TM5 for more performance-demanding machines, with Modicon TM7 for harsh environments; Both Performance I/O ranges (Modicon TM5 and TM7) allow safety functions to be implemented using the Modicon TM5CSLC safety logic controller
- > Preventa XPS Universal safety modules cover a wide range of safety functions, suitable for small applications with 4-5 safety functions, with diagnostic information provided to controllers via a single wire connection
- > Modicon TM3 safety functional modules are suitable for small applications covering E-Stop functions and diagnostics via TM3 bus
- > Preventa XPSMCM modular safety controllers are suitable for medium size applications with up to 20 safety functions and diagnostics via Modbus TCP, EtherNet/IP, EtherCAT, or Profinet
- > **EcoStruxure Machine Expert – Safety** optional add-on for programming safety logic controllers
- > **EcoStruxure Machine Expert – Basic** software for programming Modicon M221 logic controllers: an intuitive standalone environment accessible to basic skilled technicians
- > **EcoStruxure Machine Advisor** is a cloud-based services platform designed for machine builders to track machines in operation worldwide, monitor performance data, and resolve exceptional events, while reducing support costs by up to 50%

### Machine Automation

### Comprehensive Schneider offers for machine builders

- > Lexium servo drives, motors, and robotics are designed to control applications ranging from a single independent axis up to high-performance synchronized multi-axis machines requiring high-speed and precise positioning and movements

- > The Lexium offer is designed for a broad range of motion-centric machines in applications such as [Packaging](#), [Material Handling](#), [Material Working](#), [Food and Beverage](#), and [Electronics](#)
- > Schneider Electric has developed Tested Validated & Documented Architectures (TVDA) applicable for generic machine control applications as well as for dedicated segment applications such as Packaging, Material Handling, Material Working, Hoisting, Pumping, or generic [Machine Control applications](#)

### Choose Schneider Electric to help secure your investment and benefit from worldwide services at every step of your project

- > From planning and inception to modernization, we help ensure optimal technical and business performance. Our field service engineers combine 30+ years of manufacturer-level experience with the latest technology to bring innovation to every level of our offer, and every step of your project.
- > Our machine control dedicated services empower you to maximize your business infrastructure and face increasingly stringent demands on productivity, safety, equipment availability, and performance optimization.

### Presentation

#### Applications

Modicon M251 controllers offer an innovative, high-performance solution in the field of modular machines and distributed architectures.

Thanks to their compact dimensions, they can optimize the size of wall-mounted and floor standing control system enclosures.

Since Modicon M251 controllers have no embedded I/O, field devices such as variable speed drives and remote I/O are connected on either the CANopen and SAE J1939 machine buses, or over the Ethernet network.

Modicon M251 controllers have an embedded Ethernet port offering FTP Client/Server, Web Server, SQL Client, SNMP Client/Server V1 and V2, OPC UA Server, SNTCP Client and DNS Client services, meaning they can easily be integrated in control system architectures for remote monitoring and maintenance of machines by means of applications for smartphones, tablets and PCs.

The wealth of embedded functions minimizes the cost of the machine:

- Functions embedded in the controller: Modbus serial link, USB port dedicated to programming, Ethernet I/O Scanner, CANopen and SAE J1939 fieldbuses for distributed architectures and advanced position control functions (PLCopen libraries).
- Functions embedded in Modicon TM3 expansion modules (1): functional safety modules, motor-starter control module and remote expansion system.
- Functions embedded in Modicon TM4 communication modules.

The processing power and the memory size of M251 controllers are ideal for targeting high-performance applications.

EcoStruxure Machine Expert V1.1 programming software (2) is powerful and intuitive, making it quick to create applications. Existing applications in Modicon M221, M238 and M258 ranges can also be retrieved easily, thus protecting the investment already made.

#### Main functions

- Both Modicon M251 logic controllers come in an identical format (w x h x d): 54 x 90 x 95 mm (2.13 x 3.54 x 3.74 in.)
- Modicon M251 controllers have no embedded I/O but can be combined with Modicon TM3 expansion modules.
- Every M251 controller has a Run/Stop switch.
- A slot for an industrial SD memory card (Secure Digital card) is available on every M251 controller.
- Every M251 controller has a QR code for direct access to its technical documentation.

#### Embedded communication

M251 logic controllers incorporate up to 5 communication ports:

- The **TM251MESE** controller incorporates:
  - an "Ethernet 1" (3) network with 2 RJ 45 ports connected by an internal switch, this network being mainly for communication between machines or to your factory network
  - an "Ethernet 2" (3) network with an RJ 45 port, optimized for connecting field devices (variable speed drives, distributed I/O, etc.) by means of the Ethernet I/O Scanner service (Industrial Ethernet Manager). This port can also be connected to a factory network.
- The **TM251MESB** controller incorporates:
  - an "Ethernet" (3) network with 2 RJ 45 ports connected by an internal switch, this network being mainly for communication between machines or to your factory network
  - a CANopen port (CANopen master/SAE J1939 Request Manager) for connecting field devices (variable speed drives, distributed I/O, etc.)
- Moreover, both these M251 logic controllers incorporate:
  - a serial link port
  - a programming port

#### Processing power

- Execution speed: 22 ns/Boolean instructions
- Program: 128 K Boolean instructions
- DualCore processor
- RAM: 64 MB Flash memory: 128 MB
- Program size: 8 MB for application and symbols

#### Programming

Modicon M251 logic controllers are programmed with EcoStruxure Machine Expert V1.1, consult catalog [DIA3ED2180701EN](#).

(1) Consult catalog [DIA3ED2140109EN](#).

(2) Consult catalog [DIA3ED2180701EN](#).

(3) Ethernet with embedded Web server function.

### Options for Modicon M251 controllers

#### Memory card

The **TMASD1** industrial SD memory card, 256 MB capacity, is available for:

- application backup
- program transfer
- data logging
- firmware update

#### Communication modules (1)

2 communication module models are dedicated to Modicon M251 logic controllers:

- the **TM4ES4** Ethernet switch module
- the **TM4PDPS1** slave Profibus DP module

Modicon TM4 communication modules are assembled by simple interlocking on the left-hand side of the controllers and a bus expansion connector is used to distribute data and the power supply.

Up to 3 communication modules can be added on the left of M251 logic controllers.

See [page 18](#).

#### ■ Ethernet switch module

- The **TM4ES4** module is a 4-port Ethernet interface (10/100 Mbps, MDI/MDIX) with the following protocols: Ethernet Modbus TCP (Client/Server), EtherNet/IP (Adapter/Originator), UDP, TCP, SNMP and EcoStruxure Machine.
- Clipped onto the left-hand side of a Modicon M251 controller, it consists of an autonomous switch with 4 ports, supplied by the Modicon M251 controller.

#### ■ Slave PROFIBUS DP module

- The **TM4PDPS1** communication module can be used to configure a Master connection on the PROFIBUS DP bus.

(1) For rules for combining Modicon TM4 communication modules and Modicon M251 logic controllers, see [page 18](#).

### Communication via modem and router

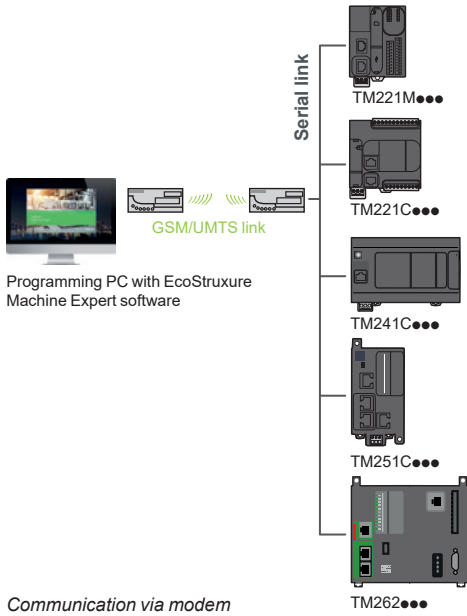

The communication via modem and router offer is dedicated to the following applications:

- Synchronization between remote machines; direct data exchange between controllers.
- Remote maintenance; access to the controller via the EcoStruxure Machine Expert V1.1 . programming software.
- Remote control and monitoring of machines; receipt of information and sending commands on a GSM/UMTS phone (1).

This offer comprises a Schneider Electric modem, GSM/UMTS modem and a VPN router made by eWon.

For the modem and router, please consult [our website](#)

(1) Global System Mobile (2G)/Universal Mobile Telecommunications System (3G).

### I/O expansion with Modicon TM3 modules

#### Modicon TM3 expansion modules

Modicon M251 logic controllers have no embedded I/O, yet can still take Modicon TM3 expansion modules for connecting sensors and actuators locally:

- digital I/O modules for creating configurations with up to 488 digital I/O
- analog I/O modules for creating configurations with up to 114 analog I/O, to receive the signals from, for example, position, temperature, and speed sensors and also capable of controlling variable speed drives or any other device with a current or voltage input
- expert modules for controlling TeSys motor-starters, connected with RJ 45 cordsets to simplify wiring the control section
- functional safety modules which simplify wiring and can be configured in the EcoStruxure Machine Expert V1.1. software

In addition, the Modicon TM3 expansion system is flexible due to the possibility of remotely locating some of the Modicon TM3 modules in the enclosure or another cabinet, up to 5 meters (16.404 ft) away, using a bus expansion system.

The Modicon TM3 expansion system is common to the ranges of Modicon M221, M241 and M251 logic controllers, and Modicon M262 Logic/Motion controller meaning that applications can be upgraded without changing expansion module.

#### I/O configuration

EcoStruxure Machine Expert software is used to configure the local and remote I/O and distributed I/O islands.

- 1 TM4ES4 Ethernet switch communication module
- 2 Modicon TM251MESE logic controller
- 3 Digital I/O modules
- 4 Analog I/O modules
- 5 Expert module for controlling TeSys motor starters
- 6 Functional safety modules
- 7 Bus expansion modules (transmitter and receiver) and bus expansion cable
- 8 TM3BC bus coupler module

#### Local I/O

Maximum configuration: 7 Modicon TM3 expansion modules associated with a Modicon M251 logic controller.

#### Remote I/O

Maximum configuration : 14 Modicon TM3 expansion modules (7 local modules + 7 remote modules) with Modicon TM3 bus expansion modules (transmitter module and receiver module).

The transmitter and receiver bus expansion modules can be used to:

- increase the number of expansion modules that can be connected to a Modicon M25 logic controller from 7 to 14
- locate Modicon TM3 expansion modules remotely, up to 5 m (16.40 ft) away

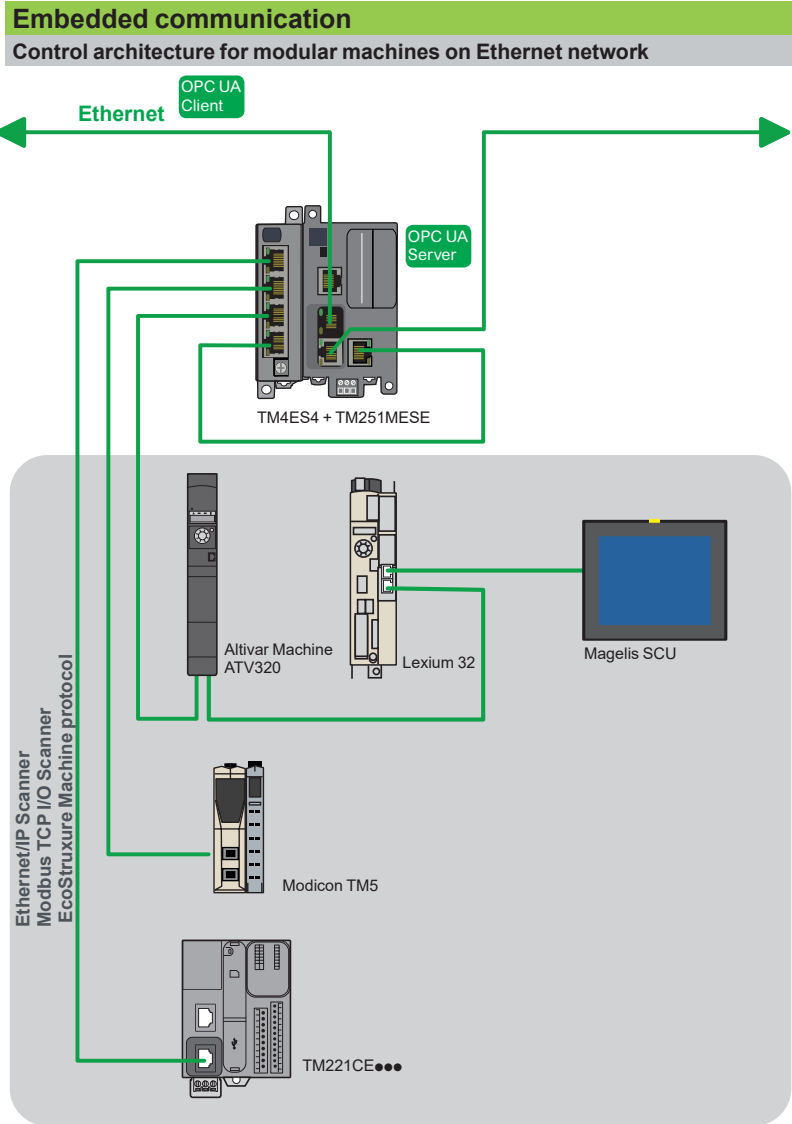

The transmitter module and receiver module are physically connected by a bus expansion cable, reference **VDIP184546●●●**, or any other Cat 5E, F/UT cable.

#### Distributed I/O

The Modicon TM3BC bus coupler module is used to create distributed I/O islands on the Ethernet network.

- The bus coupler module is connected via an isolated RJ45/RJ45 cable.
- Maximum configuration: 14 Modicon TM3 expansion modules (7 modules + 7 modules) with the Modicon TM3 bus expansion system (transmitter module and receiver module).

(1) Compatibility of expansion module offers: the majority of Modicon TM2 expansion modules can be used with M251 logic controllers. Nonetheless, inserting a Modicon TM2 expansion module in a configuration can increase the expansion module execution times by as much as a few milliseconds. The compatibility of Modicon TM2 expansion modules with M251 logic controllers is described in detail on our website [www.schneider-electric.com](http://www.schneider-electric.com).

M251 controllers have 2 embedded Ethernet ports connected by an RJ 45 switch (10/100 Mbps, MDI/MDIX) with the Modbus TCP, EtherNet/IP, UDP, TCP, SNMP and EcoStruxure Machine on Ethernet protocols. These ports are specifically for communication between machines or to your factory network. These ports are marked "Ethernet" or "Ethernet 1".

- Every M251 controller has an embedded web server and FTP (Client/Server) server. As well as the default address based on the MAC address, a controller IP address can be assigned via a DHCP server or via a BOOTP, SQL Client and SNMP (Client/Server) server.
- Ethernet ports also offer the same upload/download, update and debug functions as the programming port (USB mini-B) when the controller is supplied with power.
- A firewall is used to filter the IP addresses that are authorized to access the controller and to lock each communication protocol.
- **TM251MESE** controllers have, in addition to the 2 embedded "Ethernet and Ethernet 1" ports, an optimized "Ethernet 2" port for connecting field devices (variable speed drives, distributed I/O, etc.), RJ 45 type, with EtherNet/IP Scanner, Modbus TCP I/O Scanner, Ethernet Modbus TCP Client/Server, EtherNet/IP Originator and Adapter, UDP, TCP, SNMP and EcoStruxure Machine services.
  - EtherNet/IP Scanner can be used to connect up to 16 slave devices managed by the controller in 10 ms (1024 input words + 1024 output words).
  - Modbus TCP I/O Scanner can be used to connect up to 64 slave devices managed by the controller in 64 ms.

Connection cables and accessories for Industrial Ethernet network: please consult our catalog [DIA3ED2160105EN](#).

### Embedded communication (continued)

#### Control architecture for modular machines on CANopen bus

**TM251MESC** controllers have an embedded master CANopen port.

- The link can be configured between 20 Kbps and 1 Mbps, and supports up to 63 slaves with 252 TPDO (1008 words) and 252 RPDO (1008 words).
- CANopen-based architectures can be used to distribute I/O modules as close to the sensors and actuators as possible, thus reducing wiring costs and times, and to communicate with different devices such as variable speed drives, servo drives, etc.
- The CANopen configurator is integrated in the EcoStruxure Machine Expert V1.1 software and can also be used to import standard description files in EDS format.

**CANopen connection cables and accessories: please consult our catalog [DIA3ED2160104EN](#).**

#### Communication on SAE J1939 network

The SAE J1939 protocol is available on the CANopen port of the TM251MESC logic controller.

The SAE J1939 protocol is mainly used in the commercial vehicles sector to communicate with the various electronic control units embedded in the same vehicle such as the engine, transmission, braking system, retarder and dashboard, etc.

#### Serial link

Every M251 controller has an embedded serial link that can be configured as RS 232 or RS 485.

In addition, a 5 V/200 mA voltage is available on the RJ 45 connector, which can therefore power a Magelis **XBTR** or **XBTRT** HMI or the **TCSWAAC13FB** Bluetooth® communication adapter, or other devices.

This link incorporates the two most commonly used protocols on the market:

- Master or Slave Modbus ASCII/RTU
- Character string (ASCII)

**Connection cables and accessories for serial link: please consult catalog [DIA3ED2160106EN](#).**

#### Programming port with power off charging function

The programming port, equipped with a USB mini-B connector, is embedded in every M251 controller; it is dedicated to communication with a PC equipped with EcoStruxure Machine Expert V1.1 for:

- programming
- debugging
- maintenance

In addition, it offers the ability to load an application program or update the firmware without the controller being powered by another source.

TM251MESE controller

TM251MESC controller

### Description

#### M251 controllers

- 1 Removable screw terminal block, 3 terminals for connecting the 24 V  $\overline{\text{DC}}$  supply.
- 2 2 RJ 45 connectors connected by an internal switch for “Machine” or “Factory” Ethernet network, with exchange and activity speed LED indicator.
- 3 On **TM251MESE** controller: RJ 45 connector for “fieldbus” Ethernet 2 network with exchange and activity speed LED indicator.
- 4 On **TM251MESC** controller: a connector for linking to the CANopen and SAE J1939 machine bus (9-way SUB-D).
- 5 SL serial link port (RS 232 or RS 485): RJ 45 connector.
- 6 Run/Stop switch.
- 7 TM4 bus connector: communication bus for linking to TM4 $\bullet\bullet\bullet$  communication modules.
- 8 QR code for access to the controller technical documentation.
- 9 Modicon TM3 bus connector for linking to a Modicon TM3 expansion module.
- 10 LED display block showing: the status of the controller and its components (battery, industrial SD memory card), the status of the embedded communication ports (Ethernet 1 and 2, CANopen, serial link).

#### Behind the removable cover 11, 12, 13

- 11 Slot for the industrial SD memory card.
- 12 Backup battery slot.
- 13 A USB mini-B connector for a programming terminal.
- 14 Lugs for panel mounting, with screws.
- 15 Clip for locking on  $\perp$  symmetrical rail.

### Characteristics of M251 logic controllers

#### Conformity

##### ■ Certifications

- CE, cULus Listing Mark, C-Tick, EAC, LR, ABS, DNV and GL.
- ODVA and Achilles.

##### ■ Standards

- IEC/EN 61131-2 (Edition 2 2007), UL508 (UL61010-2-201), ANSI/ISA 12.12.01-2007, CSA C22.2 No. 213, No. 142, E61131-2 and IACS E10.

#### Environmental characteristics

- Ambient operating temperature: - 10...+ 55°C (+14...+ 131°F)
- Storage temperature: - 40...+ 70°C (- 40...+ 158°F)
- Relative humidity: 5...95% (non-condensing)

#### Operating altitude:

- 0...2,000 m (0...6,562 ft): complete specification for temperature and exposure
- 2,000...4,000 m (6,562...13,123 ft):
  - temperature derating: + 1°C/400 m (+ 1.8°F/1,312 ft)
  - insulation losses: 150 V $\overline{\text{DC}}$ /1,000 m (150 V $\overline{\text{DC}}$ /3,280 ft)

- Storage altitude: 0...3,000 m (0...9,842 ft)

#### Immunity to mechanical stress:

- For 1131: 5...8.4 Hz (amplitude 3.5 mm/0.138 in.); 8.4...150 Hz (acceleration 1 g)
- For merchant navy: 5...13.2 Hz (amplitude 1.0 mm/0.039 in.); 13.2...100 Hz (acceleration 0.7g)

#### Supply characteristics

- 24 V  $\overline{\text{DC}}$  power supply
- Voltage limit (including ripple): 19.2...28.8 V  $\overline{\text{DC}}$
- Immunity to micro-cuts (class PS-2): 10 ms
- Max. consumption: 45 W

	from	to			
Programming cables	PC USB port	USB mini-B port on M251 controllers	3 m (0.98 ft)	<a href="#">TCSXCNAMUM3P</a> (3)	0.065 0.143
			1.8 m (5.90 ft)	<a href="#">BMXXCAUSBH018</a>	0.065 0.143

(1) M251 controllers are supplied with:  
 - a removable screw terminal block for connecting the power supply  
 - a BR2032 button cell backup battery

(2) Every M251 logic controller has an embedded USB mini-B programming port.

(3) Unshielded, non-grounded cable. Only for use on temporary connections. For permanent connections, use cable reference BMXXCAUSBH018.

### Presentation

#### Applications

The Modicon TM4 communication module offer is dedicated to Modicon M241 and Modicon M251 logic controllers, increasing the options for connection.

Two communication module models are available:

- The TM4ES4 Ethernet switch module, offering an Ethernet connection with 4 ports
- The TM4PDPS1 Profibus DP slave module

#### ■ Ethernet switch module

The TM4ES4 module is a 4-port Ethernet interface (10/100 Mbps, MDI/MDIX) with the following protocols: Ethernet Modbus TCP Client/Server, Ethernet/IP Adapter, UDP, TCP, SNMP, OPC UA Server and EcoStruxure Machine.

- The TM4ES4 module is ready for use as soon as it is connected to the communication bus of M241 and M251 controllers.
- This module is used to add the Ethernet function to TM241C24● and TM241C40● controllers without an embedded Ethernet port, while offering an additional Ethernet switch function.
- Connected on controllers with embedded Ethernet port type TM241CE24●●● or TM241CE40●●●, it can constitute a second Ethernet link for the "Machine" or "Factory" network.
- Connected on controllers with an embedded Ethernet port type TM241CE●●● or on a TM251MES● controller, it can also constitute an autonomous switch with four ports: communication between the TM4ES4 module and the Modicon M241 and M251 controllers is not automatically enabled by the bus connector.

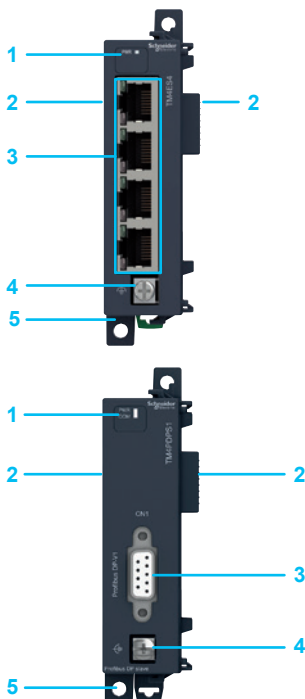

#### ■ Slave Profibus DP module

The TM4PDPS1 communication module can be used to configure a slave connection on the Profibus DP bus.

#### Rules for combination

Up to 3 communication modules (in total) can be added on the left of M241 and M251 logic controllers, in order to increase their options for connection to the Ethernet and Profibus networks.

- TM241C24●●●, TM241C40●●●, TM241CE24●●● and TM241CE40●●● controllers can all be provided with a TM4ES4 module with the Ethernet port function and 2 TM4ES4 modules with the autonomous switch function while complying with the maximum number of 3 TM4 modules in total.
- TM241CEC24● and TM251●●● controllers can be provided with 3 TM4ES4 modules with the autonomous switch function while complying with the maximum number of 3 TM4 modules in total.
- TM4 communication modules are assembled by simply clipping them onto the left-hand side of M241 and M251 controllers, and a bus expansion connector is used to distribute data and power.

### Description

#### ■ TM4ES4 Ethernet switch module

- 1 Power on LED indicator.
- 2 Bus connector (1 on each side).
- 3 4 RJ 45 connectors for Ethernet network, with exchange and activity speed LED indicator.
- 4 Screw terminal for the functional ground (FG) connection.
- 5 Locking clip on Lr symmetrical rail.

#### ■ TM4PDPS1 slave Profibus DP module

- 1 Power on LED indicator.
- 2 Bus connector (1 on each side).
- 3 9-way SUB-D connector for connection to the Profibus DP bus.
- 4 Screw terminal for the functional ground (FG) connection.
- 5 Locking clip on Lr symmetrical rail.
