Features

The Instrument Area Network consists of up to eight physically separated wireless end nodes for measurement and control; a wireless central concentrator for relaying data to and from a plant area wireless network (either a sensor network or the upstream network); and a customer-supplied device that has a standard web browser and Wi-Fi capability, such as a tablet, computer, or smartphone.

Key features include

- Easy installation, configuration, and activation of a central concentrator and up to eight end nodes to create the wireless Instrument Area Network
- End nodes for absolute, gauge, and differential pressure measurements; temperature measurements from an RTD or thermocouple
- Ability to remotely communicate with and configure the central concentrator and end nodes with a user-supplied device (such as a tablet, computer, or smartphone) with Wi-Fi capability and a web browser
- · Simple, elegant design with few mechanical parts
- · Wi-Fi and Bluetooth Low Energy technology
- · Communication with the upstream WirelessHART network
- Agency certifications to meet numerous requirements for hazardous and nonhazardous locations
- CE marked; meets the requirements of applicable European Union directives: RED, ATEX, RoHS, and PED (WDP10 only)

Browser Interface

A simple web interface allows you to work with the network from a standard web browser with JavaScript enabled. Once you have connected to the network's Wi-Fi signal, you can access the Network Overview web page at http://10.10.10.10/ian/page.

The Network Overview page shows a representation of the Instrument Area Network, with the concentrator in the center and all connected end nodes around it. You can read each end node's hardware ID and most recent measurement; the measurements update approximately once per second.

From the Network Overview page, you can configure network parameters, connect the WirelessHART network, and configure each end node's sampling period and measurement units. In addition, you can access release notes, user documentation, and end node calibration certificates.

Figure 1 - Network Overview Page

Establishing an Instrument Area Network

Creating a wireless Instrument Area Network is fast and easy. If the unit does not have a pushbutton, activate the central concentrator by pushing the antenna toward the outer edge of the housing and holding for two seconds. If the unit does have a pushbutton, "push" refers to pressing the button and holding for two seconds. The central concentrator's LEDs flash rapidly for a few seconds while it sets up the wireless Instrument Area Network. Then you can connect the end nodes to the central concentrator one at a time by pushing each end node to connect it to the central concentrator.

LEDs on the central concentrator, the newly added end node, and any other end nodes that are connected to the network flash rapidly and out of sync. When connecting is complete, the flashing LEDs in the central concentrator and all connected end nodes synchronize, indicating that the end node has been connected to the Instrument Area Network. The central concentrator can now relay the end nodes' measurement data to the WirelessHART network.

Removing an end node from the network (disconnecting) is just as easy. Push any connected end node to activate the Instrument Area Network; the LEDs of the central concentrator and all connected end nodes flash in sync. Before the flashing stops, simply push the end node you wish to disconnect. The LEDs on the end node leaving the group flash out of sync with the other Instrument Area Network devices to indicate that it is disconnecting. Refer to MI 020-750 for details.

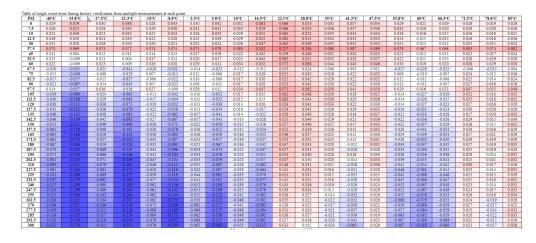

Calibration Certificates

A calibration certificate verifies that the end node meets the reference accuracy specification. The calibration certificate is embedded in the end node; you can access it from the Network Overview page.

Figure 2 - Example of Calibration Certificate of Compliance - Screen 1

Calibration Certificate of Compliance

Schneider Electric certifies that the instrument referenced above has been fully tested and calibrated prior to shipment in accordance with Schneider Electric standard manufacturing procedures and Quality System Guidelines.
Schneider Electric certifies that the instrument meets or exceeds the published electrical, mechanical, and operational performance characteristics. Performance rating is the maximum error as percentage of calibrated span based on reference conditions of -40,338,275,213,15,88,253,810,163,225,288,35,413,475,53,860,663,725,788,85 C and 10% to 55% RH.
All tests and calibrations were performed with instruments, equipment and standards which are directly traceable to the National Institute of Standards & Technology (NIST).

Figure 3 - Example of Calibration Certificate of Compliance - Screen 2

Radio Equipment Directive (RED)

Complies with Radio Equipment Directive (RED) requirements tested to the following standards:

- ETSI EN 300 328 V2.1.1 (2016-11)
- Under RED Article 3, 1(a) covering essential safety requirements of 2014/35/EU:
- EN 62311:2008
- EN 61010-1:2010

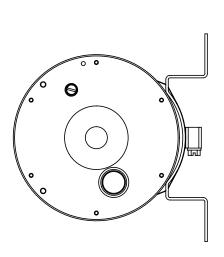

Under RED Article 3, 1(b) covering essential EMC requirements of 2014/30/EU:

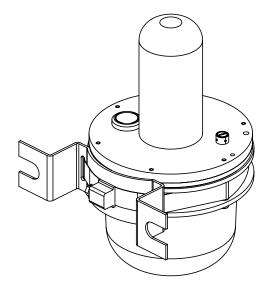

- ETSI EN 301 489-1 V2.2.0 (2017-03)
- ETSI EN 301 489-3 V2.1.1 (2017-03)
- ETSI EN 301 489-17 V3.2.0 (2017-03)
- IEC 61000-6-2 Edition 3.0 (2016-08)
- IEC 61000-6-4 Edition 3.0 (2018-02)

Mounting Brackets

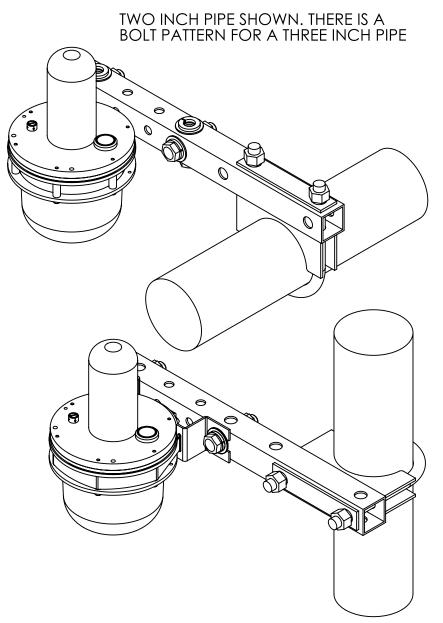

The device enclosures allow for mounting to a wall or to a two- or three-inch pipe, using the brackets shown in the diagrams. End nodes can also connect directly to the process port threads.

Figure 4 - Wall Mounting Bracket (Shown with WCC10/WCC15)

Specifications

Mounting Locations

The central concentrator has an integral antenna that allows communication to the upstream wireless network and to all connected end nodes. Choose a mounting location where the central concentrator is positioned above any metal structures, and where the integral antenna has optimal connectivity to the upstream wireless network. You can mount the central concentrator directly or with an optional mounting bracket. See Mounting Brackets, page 8.

Each end node housing has an integral process related sensor located on the bottom center of the unit's base. Select a mounting location for each end node based on the application and the process measurement location.

The distance between the central concentrator and each end node should not exceed 10 m (33 ft). This specification does not require the central concentrator and end node to be installed in a straight line or without obstruction. End nodes can communicate with the central concentrator even in harsh metal-obstructed environments (refer to RF Characteristics, page 11).

NOTICE

POTENTIAL EQUIPMENT DAMAGE

Do not expose mounting locations to forceful impacts like heavy falling objects that could damage the device enclosures.

Failure to follow these instructions can result in equipment damage.

Operating Limits

Operative Limits for measurement and transmission are defined in accordance with ANSI/ISA 51.1-1979 (R1993).

Description	Operative Limits
Ambient Temperature	-40 and +60°C (-40 and +176°F) ¹
Silicone Fill Fluid	-46 and +121°C (-50 and +250°F)
Relative Humidity	0 and 100%
Vibration	1 g constant acceleration input over a frequency range of 5 to 200 Hz
Mounting Position	No limit

Battery Life

- Central concentrator: 5+ years
- End node: 10+ years

These estimates assume 25°C (77°F) ambient temperature and 16-second update rates for each end node, with eight end nodes connected to each concentrator. Actual battery life depends on ambient temperature and precipitation, configured update rates, and device positioning. For greater battery efficiency and ease of use, position

^{1.} The new temperature limit for ATEX certified End Nodes is +60°C and the central concentrator will remain at +80°C.

devices for best connectivity, and monitor the low battery alarm feature. You can further optimize battery life by configuring for longer interval measurement update rates if they are suitable for your application.

All Instrument Area Network devices are shipped with a battery installed. The Wi-Fi interface is disabled by default, and normally remains active for only five minutes when connecting and disconnecting end nodes.

RF Characteristics

- · 2.4 GHz spread spectrum, ISM license-free band
- 58 mW maximum operational RF transmit power
- Link margin (LKM):

Wireless Communication Type	Transmitter Power (TxP)	Receiver Sensitivity (RS)
Bluetooth Low Energy	+5 dBm	-97 dBm
Wi-Fi	+15 dBm	-90 dBm
WirelessHART	+10 dBm	-96 dBm

Process Connections

End Node	Process Connection
Temperature (WRT10)	Without thermowell: Connects directly to the process using an external 1/2 NPT male thread.
	With thermowell: Thermowell connects directly to the process.
Absolute Pressure (WAP10) Gauge Pressure (WGP10)	Connects to the process using an external 1/2 NPT male thread.
Differential Pressure (WDP10)	Connects to the process with a 1/4-18 NPT female process connection and fixing thread 7/16"-20 UNF at 41.3 mm (1.625 inches) center distance.

End Node Connections

Up to eight end nodes can be wirelessly connected with the central concentrator. Together, the end nodes and the central concentrator comprise an Instrument Area Network. The end nodes of the Instrument Area Network relay their measurements to upstream networks, such as WirelessHART and the Wi-Fi administrator interface.

The end nodes are designed to be placed anywhere within 10 m (33 ft) of the central concentrator in harsh metal-obstructed environments (TX Power +5 dBm, RX Sensitivity -97 dBm link margin at 2.4 GHz).

Range Limits

End Node	Limits
Temperature with RTD	-200°C and +885°C (-328°F and +1625°F)
Temperature with Thermocouple	-100 mV and +100 mV

End Node	Limits	Limits				
Absolute Pressure	Detected er +140°F)	ror is 0.25% of full scale, across -40°C to +60°C (-40°F to				
	Code	Range Limits				
	С	0 and 0.21 MPaa (0 and 30 psia)				
Gauge Pressure	Detected er +140°F)	ror is 0.25% of full scale, across -40°C to +60°C (-40°F to				
	Code	Range Limits				
	С	0 and 0.21 MPag (0 and 30 psig)				
	D	0 and 2.1 MPag (0 and 300 psig)

Differential Pressure	Detected error is 0.25% of full scale plus static pressure offset er					
	Code	Range Limits				
	В	-50 and +50 kPa (-7.25 and +7.25 psi)				
	С	-210 and +210 kPa (-30 and +30 psi)				
	D	-0.21 and +2.10 MPa (-30 and +300 psi)				

Maximum Static, Overrange, and Proof Pressure Ratings

HAZARD OF EXPLOSION

Exceeding the proof pressure can cause the sensor to rupture forcefully. Avoid exposing end nodes to the proof pressure limit.

Failure to follow these instructions will result in death or serious injury.

NOTICE

POTENTIAL EQUIPMENT DAMAGE

Exceeding the overrange pressure limit for the end nodes can cause damage to the end nodes, degrading their performance. The end node could become nonfunctional after exceeding the overrange pressure. Avoid exposure to the overrange pressure limit.

Failure to follow these instructions can result in equipment damage.

Table 1 - Absolute Pressure Transmitters

	Code	Maximum Overrange Pressure	Maximum Proof Pressure
ſ	С	2.1 MPaa (300 psia)	5.51 MPaa (800 psia)

Table 2 - Gauge Pressure Transmitters

Code	Maximum Overrange Pressure	Maximum Proof Pressure
С	2.1 MPag (300 psig)	5.51 MPag (800 psig)
D	20.7 MPag (3,000 psig)	55.1 MPag (8,000 psig)
E	34.5 MPag (5,000 psig)	52.4 MPag (7,600 psig)
F	59.1 MPag (8,580 psig)	152 MPag (22,000 psig)
J	99 MPag (14,300 psig)	180 MPag (26,000 psig)

Table 3 - Differential Pressure Transmitters

Code	Maximum Static Pressure	Maximum Proof Pressure
В		
С	25 MPa (3,626 psi)	100 MPa (14,500 psi)
D		

Measurement Update Rate

1 to 60 seconds, configurable. End nodes ship with a default update rate of 16 seconds, corresponding to a report rate of 1/30 Hz.

Physical Specifications

Description	Specification
Enclosure Materials	304 ss; polycarbonate; PTFE antenna cover (WCC10 only)
Process Wetted Materials (End Nodes only)	316L ss
Sensor Fill Fluid (Pressure End Nodes only)	Silicone oil
Ingress Protection	The enclosure has the rating of IP66/67 as defined by IEC 60529
Dimensions (including Mass)	See Nominal Dimensions, page 20
Mounting Position	See Mounting Brackets, page 8

Electrical Certifications

This equipment has been designed to meet the electrical safety descriptions listed in this table. Contact Global Customer Support for information or status of testing laboratory approvals or certifications.

Refer to Model Codes, page 15 for availability of electrical safety design codes with each device, and refer to MI 020-750 for connectivity requirements.

Table 4 - Electrical Certifications for End Nodes and Central Concentrator (WCC10)

Order WirelessHART gateways separately with part number 217229 or 252863. 4.

Refer to Electrical Certifications, page 14 for details. Contact Global Customer Support for availability. This bracket is required and included with the WCC10. 5.

^{6.} 7.

IECEx is included with both the CU and EU certifications.

^{8.} This bracket is required and included with the WCC10/WCC15.

Table 8 - Temperature End Node (WRT10) (Continued)

	Description
Sensor Cons	truction
W	Fixed 1/2 NPT
S	Spring-Loaded for Thermowell Insertion
Sensor Inser	ion Length ⁹
020	2.0 inches (50.8 mm)
025	2.5 inches (63.5 mm)
030	3.0 inches (76.2 mm)
035	3.5 inches (88.9 mm)
040	4.0 inches (101.6 mm)
045	4.5 inches (114.3 mm)
050	5.0 inches (127.0 mm)
055	5.5 inches (139.7 mm)
060	6.0 inches (152.4 mm)
065	6.5 inches (165.1 mm)
070	7.0 inches (177.8 mm)
075	7.5 inches (190.5 mm)
080	8.0 inches (203.2 mm)
085	8.5 inches (215.9 mm)
090	9.0 inches (228.6 mm)
095	9.5 inches (241.3 mm)
100	10.0 inches (254.0 mm)
105	10.5 inches (266.7 mm)
110	11.0 inches (279.4 mm)
115	11.5 inches (292.1 mm)
120	12.0 inches (304.8 mm)
125	12.5 inches (317.5 mm)
130	13.0 inches (330.2 mm)
135	13.5 inches (342.9 mm)
140	14.0 inches (355.6 mm)
145	14.5 inches (368.3 mm)
150	15.0 inches (381.0 mm)
155	15.5 inches (393.7 mm)
160	16.0 inches (406.4 mm)
165	16.5 inches (419.1 mm)
170	17.0 inches (431.8 mm)
175	17.5 inches (444.5 mm)

^{9.} The Sensor Insertion Length must equal the Thermowell Insertion Length + Thermowell Lagging Length + 1.5 inches.

Table 8 - Temperature End Node (WRT10) (Continued)

Code	Description
Thermowell	Attached to Sensor
N	No Thermowell
Т	Threaded 3/4 NPT
S	Socket Weld 1.05 inches
W	Weld-In 1.5 inches
Thermowell	Insertion Length ¹⁰
000	0.0 inches (0 mm)
020	2.0 inches (50.8 mm)
025	2.5 inches (63.5 mm)
030	3.0 inches (76.2 mm)
035	3.5 inches (88.9 mm)
040	4.0 inches (101.6 mm)
045	4.5 inches (114.3 mm)
050	5.0 inches (127.0 mm)
055	5.5 inches (139.7 mm)
060	6.0 inches (152.4 mm)
065	6.5 inches (165.1 mm)

Optional Selections	
-M1	Painted Steel Mounting Bracket with Plated Steel Bolts ¹⁵
-M2	316 ss Bracket with 316 ss Bolts
Example: WI	DP10-W122C0CU-M1

Refer to Electrical Certifications, page 14 for details. Contact Global Customer Support for availability.
 The material used for the process connector is the same material used for the process cover.

^{15.} Contact Global Customer Support for availability.

Nominal Dimensions

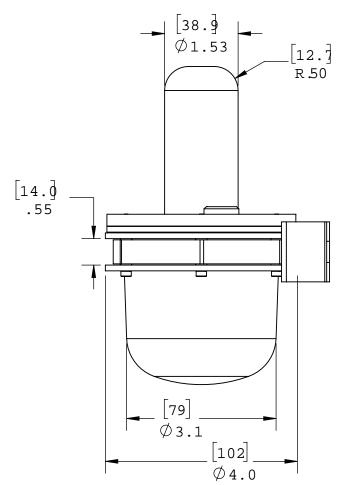

For dimensional information specific to your sales order, contact your sales representative to order a Certified Dimensional Print (CDP).

All dimensions in diagrams are shown in millimeters over inches (^{mm}/_{in}).

Table 12 - Approximate Mass

Model	Mass
WCC10, with standard wall mount bracket and clamp only	0.9 kg (2.0 lbs)
WCC15, with standard wall mount bracket and clamp only	1.1 kg (2.35 lbs)
WRT10, welded (6" probe)	0.9 kg (2.0 lbs)
WRT10, spring-loaded (6" probe)	1.1 kg (2.4 lbs)
WAP10	0.8 kg (1.7 lbs)
WGP10	
WDP10	3.7 kg (8.2 lbs)
